TECHNISCHE UNIVERSITÄT BERLIN

Certificate
Science Communication for (Junior) Scholars

Matthias König

successfully participated in the Science Communication for (Junior) Scholars certification program until 23.09.2026.

The program comprises 200 work units (WU) of 45 minutes each and is run by the Center for Scientific Continuing Education and Cooperation (ZEWK) at TU Berlin.

The program strengthens the skills (junior) scholars need to make the complex content of their research communicable for target groups unfamiliar with the field. By doing so, they open up their research findings and expertise to a wide audience and help benefit society.

As a core element of the program, participants develop their own communication concept. Cross-disciplinary topics like media relations, communication strategies, and basic legal principles as well as the basics and specifics of text writing, presentation, and design are directly applied, tested, and critically examined in the participants' own projects.

Berlin, 23.09.2026

Prof. Dr. Annette Mayer

Head oft he Center for Scientific Continuing Education and Cooperation (ZEWK) at TU Berlin

Dr. Alexandra Schulz

Scientific Continuing Education Coordinator oft he Science Communication certification program (ZEWK)

ZEWK
Zentraleinrichtung Weiterbildung und Kooperation

Matthias König qualified for the certificate by completing the following modules in our Science Communication continuing education program:

1. Introduction course on developing a communcation concept (20 AE)

- Auf geht's! Mit klarem Konzept in die Wissenschaftskommunikation

2. Foundation and specialization courses (133 AE)

- Welches Format passt zu mir? Individuelle Wissenschaftskommunikation planen und umsetzen
- DHPE - Medical education podcast, Instructional video, ePosters
- Kommunikationsstrategien in der Wissenschaftskommunikation
- Sprechen auf den Punkt – Wissen klar formulieren
- Die Stimme macht's! – Souveränes Auftreten durch Körpersprache und
- Stimme
- More impact in the auditorium How to increase your persuasiveness with professional presence
- Excellent international presentations in science
- Slidewriting: Optimizing your slides
- Visual Communication Techniques for Scientists
- Poster Design Foundations for Scientists
- Lehrvideos & Erklärfilme erstellen: Von der Idee zum fertigen Format
- Sprechtraining fürs Mikrofon
- Forschungsanträge schreiben mit ChatGPT
- Designing a Graphic Abstract
- Souverän vor (Web-)Kamera und Mikrofon

3. Practical project (70 AE)

ⓘ The practical project consists of three elements:

- Developing a communication concept
- Implementing a practical project
- Critical evaluation of the certification program

All three elements are documented in a project report. The results are presented in a final presentation and an article published on the TU Berlin website.

Agentic Workflows for Science Communication: AI-Assisted Updating of a Research Group Website

As part of this practical project, the König Research Group's website was restructured and technically modernized using agentic, AI-powered workflows. Building on an analysis of target audiences and communication needs, the project resulted in a clear concept, a responsive Astro website, a validated and interconnected data foundation, as well as automated tests and live data integration. AI supported the analysis, content development, programming, and quality assurance, while subject-matter review and publication remained under human responsibility. The result is a sustainable process for clear, accessible, and up-to-date science communication.
